2RD-8 Series

Description

Gas discharge tubes (GDTs) are generally in a high insulation resistance state, equivalent to an open circuit, which has almost no impact on the normal operation of the circuit. When transient overvoltage occurs in the circuit and the voltage amplitude exceeds the breakdown voltage of the GDT, the gas inside the GDT is ionized, causing the GDT to quickly conduct and limit the overvoltage to a lower level, thereby protecting electronic devices or circuit components connected in parallel from high voltage impact damage. After the overvoltage disappears, the GDT immediately returns to a high insulation resistance state, and the circuit resumes normal operation.

The 2RD-8 series GDT is a device that offers axial leads or surface mount packaging. It is not only small in size and easy to install on various compact printed circuit boards (PCBs), but also has excellent performance. When used in high-frequency communication circuits, the low capacitance characteristic minimizes its impact on the signal. High insulation resistance ensures that the performance of the circuit will not suffer additional losses under normal operating conditions. The 2RD-8 series GDT can not only be used to protect communication interfaces, but its ability to withstand high surge currents (8/20uS, 20KA) also makes it suitable for power protection.

Electrical symbol

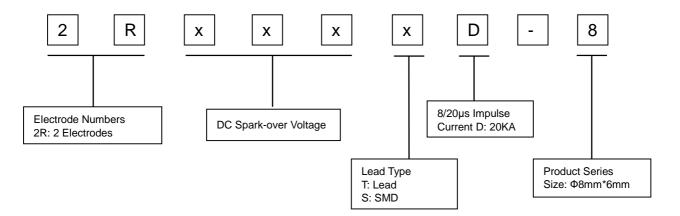

Features

- I Excellent response to fast rising transients
- I Stable breakdown voltage
- I GHz working frequency
- I 8/20µs Impulse current capability: 20KA
- I Non-Radioactive
- Ultra Low capacitance (<1.5pF)</p>
- I Size: Φ8mm*6mm

Applications

- I MDF modules
- I xDSL equipment
- I RF systems
- I Antenna
- I Base stations
- I Repeaters, Modems
- I Telephone Interface, Line cards
- Data communication equipment
- Line test equipment
- I Power supplies
- I Surge protectors, Alarm systems

Soldering Parameters - Wave soldering (Thru-Hole Devices)

Wave Soldering Condition		Pb-Free assembly
Preheat	Temperature Min	100°C
	Temperature Max	150°C
	Time (Min to Max)	60-180 Seconds
Solder Pot Temperature		280°C Max
Solder Dwell Time		2-5 Seconds

Soldering Parameters - Reflow Soldering (Surface Mount Devices)

Reflow Co	ondition	Pb - Free assembly
	-Temperature Min (T _{s(min)})	150°C
Preheat	-Temperature Max (T _{s(max)})	200°C
	- Time (min to max) (t _s)	60 -180 Seconds
Average r to peak	amp up rate (Liquids Temp T _L)	3°C/second max
T _{S(max)} to T	L - Ramp-up Rate	5°C/second max
Reflow	- Temperature (T _L) (Liquids)	217°C
i nonon	- Time (min to max) (t _s)	60 -150 Seconds
Peak Tem	perature (T _P)	260 +0/-5°C
Time with Temperat	in 5°C of actual peak ure (t _p)	10 - 30 Seconds
Ramp-dov	wn Rate	6°C/second max
Time 25°C	to peak Temperature (T _P)	8 minutes Max
Do not ex	ceed	260°C

Surface mounted components (SMD) may exhibit a temporary increase in the DC spark-over voltage after the solder reflow process. The components will recover within 24 hours. There is no quality defect nor change in protection levels during the temporary change in DC spark-over voltage.

2RD-8 Series

Terms and definitions

NO.	Item	Definitions	
1	Gas discharge tube(GDT)	A gap, or several gaps, in an enclosed discharge medium, other than air at atmospheric pressure, designed to protect apparatus or personnel, or both, from high transient voltages. Also referred to as "gas tube surge arrester".	
2	DC Spark-over Voltage	The voltage at which the gas discharge tube sparks over with slowly increasing d.c. voltage.	
3	Impulse Spark-over Voltage	The highest voltage which appears across the terminals of a gas discharge tube in the period between the application of an impulse of given wave-shape and the time when current begins to flow.	
5	Arc voltage	Arc voltage Voltage drop across the GDT during arc current flow.	
6	Glow voltage Peak value of voltage drop across the GDT when a glow current is flowing.		
7	Impulse discharge current 8/20µs	Current impulse with a nominal virtual front time of 8 µs and a nominal time to half-value of 20 µs.	
8	Alternating Discharge Current	The rms value of an approximately sinusoidal alternating current passing through the gas discharge tube.	
9	Insulation Resistance	Insulation resistance shall be measured from each terminal to every other terminal of the GDT. The test is performed with DC50V when normal spark-over Voltage 70~150V, others with DC100V.	
10	Capacitance	The capacitance shall be measured once at 1 MHz between all terminals unless otherwise specified.

2RD-8 Series

Cautions

- I Do not operate gas discharge tubes in power supply networks, whose maximum operating voltage exceeds the minimum spark-over voltage of the gas discharge tubes.
- I Gas discharge tubes may become hot in the event of longer periods of current stress (burn risk). In the event of overload the connectors may fail or the component may be destroyed.
- I Gas discharge tubes must be handled with care and must not be dropped.
- I Do not continue to use damaged gas discharge tubes.
- I The shown SMD pad dimensions represent a safe way to mount the arrester and are a recommendation of the manufacturer.

 During the reflow process it must be assured that no solder material reduces the insulation distance between the pads below the arrester.
- I SMD gas discharge tubes should be soldered within 24 month after shipment.
- I The electrical characteristics described in this datasheet are only typical characteristics, and all of these characteristics have been confirmed through testing and inspection. If the customer's usage requirements are different from this or have special requirements, please contact Ruilongyuan Electronics Co., Ltd. If protection failure or circuit damage occurs as a result, our company is not responsible for it.
- Ruilongyuan Electronics Co., Ltd. always strives to improve our products. Consequently, the products described in this datasheet may be updated from time to time, and the corresponding product specifications may also be updated accordingly. So, before or at the time of placing your order, please check to what extent the product descriptions and specifications contained in this publication are still applicable. Ruilongyuan Electronics Co., Ltd. still reserves the right to cease production and delivery of products. Consequently, we cannot guarantee that all products listed in this datasheet will always be available. The above provisions do not apply to individual agreements with customers for specific products.
- I Ruilongyuan Electronics Co., Ltd. models may have different product codes. Different product code representations are due to the use of different production processes, but do not affect their respective product specifications.
